

## Savvis Corporate Environmental Policy

As a provider of IT infrastructure, Savvis takes its corporate responsibility regarding environmental sustainability very seriously. We operate multiple datacenters in major commercial markets around the globe and we understand that the potential environmental effect of our industry and business may be significant.

We believe that lessening our environmental impact requires a thoughtful, balanced approach: this includes datacenter design and operational excellence, as well as promoting the use of highly-efficient shared and virtualized IT environments. It further includes establishing benchmarks for continuous improvement and encouraging a daily practice of considering sustainability in the decisions we make.

We also believe that a balanced approach means supporting the fitness of our business. Any sustainability efforts we engage in must consider the quality of service we offer our customers and the value we create for our shareholders.

With this in mind, the Savvis Sustainability Committee has adopted the following core principles to inform and drive our sustainability efforts:

1. We will seek to build and operate efficient datacenters  
We will invest in service delivery models that provide highly-efficient IT solutions to our customers
2. We will pursue sustainability initiatives that reduce the energy and materials consumption of our organization
3. We will consider sustainability in the context of customer and shareholder value when establishing energy conservation initiatives
4. We will address and meet all applicable legal requirements regarding sustainability
5. We will measure the results of our sustainability efforts

Our industry has many environmental challenges. We are committed to solving these and sharing our progress. Through open disclosure of our activities and policy we hope to lead the industry towards a more environmentally sustainable future.
